Request for Proposal

SINGER Credit Management System - Loan Model & Loan Management Platform

SINGER Business Operation

Confidentiality

The selected service provider shall maintain strict confidentiality of all information, documents, data, business processes, system details, customer information, and other materials shared by SINGER in connection with this RFP and the resulting engagement. Such information shall be used solely for the purpose of delivering the agreed services and shall not be disclosed, copied, shared, or made available to any third party without SINGER's prior written approval, except where disclosure is required by applicable law. The service provider shall implement appropriate administrative, technical, and organizational controls to protect confidential information from unauthorized access, use, disclosure, alteration, or loss. These confidentiality obligations shall remain in effect throughout the engagement and after its termination.

---

1. Introduction

SINGER Sri Lanka PLC invites proposals for a platform that originates, scores, manages and services customer loans under the SINGER CREDIT program.

1.1 About SINGER

SINGER is a company engaged in the business of manufacturing importing marketing and selling a wide range of Products including international and local brands of various categories of household items, consumer durables and appliances, electronics and electrical goods, IT products, furniture, motor bikes and agro products in Sri Lanka, with a nationwide branch network, the SINGER e-commerce website, and dealer/ distributor network.

1.2 Program model

SINGER CREDIT is a loan granted by SINGER to the customer to settle the purchase of SINGER products. It does not follow the HP model, and it must complement HP sales, not replace them.

CREDIT targets digitally active customers who avoid HP because of guarantors, paperwork and branch visits. The platform must be delivered.

- **Digital guarantors** - Security comes from bank account verification and an automatic direct-debit mandate.
- **Fully digital journey -** Onboarding and purchase on the SINGER website now, and the SINGER Marketplace app next, on the same backend.
- **Buying-power assessment -** Decisions use NIC-verified identity, customer financial documents (bank statements, salary slips, income statements) and SINGER purchase and HP history.
- **Longer tenors -** Loans of 03, 06, 12 and 18 months including any variable priods.
- **Total exposure control -** Total LKR outstanding across HP and CREDIT, per customer, capped at SINGER limits.
- **24-hour, private self-service**, with the SINGER call center support, complaints and exceptions.

1.3 Out of scope

The following are not part of this RFP and are integrated only.

- Onboarding screens, consents and customer login (SINGER website, later the Marketplace app). The Loan Model receives the customer's details by API.
- Identity verification – e-KYC.

- Bank account verification, direct-debit mandates and debit execution. The Loan Model schedules instalments and records the results.
- Payment gateway, and the SMS, email and push gateways. The Loan Model triggers payment requests and notifications.
- Customer self-service screens. The Loan Model supplies statements, history and status by API.
- The digital signature platform (SINGER's existing system).
- Goods delivery and order fulfilment (SINGER e-commerce).
- Complaints handling (SINGER call center).

2. Scope of work

The vendor will supply, implement and support an API-first platform covering five framework segments. Each segment maps to a module below.

The Loan Model delivers 31 features in nine groups.

Group	Features
A. Customer and credit assessment	01. Customer Registration 02. Customer Eligibility Check 03. Credit Score / Credit Assessment
B. Loan structuring	04. Loan Amount / Purchase Amount 05. Down Payment 06. Loan Tenure 07. Interest / Service Charge 08. Installment Calculation
C. Schedule and charges	09. Repayment Schedule 10.Due Date Management 11. Late Payment / Penalty 12. Discount / Promotional Offers
D. Limits and exposure	13. Credit Limit Management 14. Multiple Active Loans 15. Guarantor Management
E. Approval to disbursement	16. Loan Approval Workflow 17. Agreement Generation 18. Digital Signature / E-Signature 19. Disbursement / Order Confirmation
F. Repayment	20. Repayment Collection 21. Payment Allocation 22. Early Settlement 23. Loan Cancellation / Reversal
G. Delinquency and recovery	24. Delinquency / Arrears Management 25. Collection / Recovery Management
H. Customer information	26. Customer Notifications (SMS / Email / Push) 27. Loan Statement 28. Payment History 29. Loan Status Tracking
I. Governance	30. Reports & Dashboards 31. Audit Trail

The vendor's services must include solution design, configuration, integration through the APIs in section 4.1, testing support (SIT and UAT), training for SINGER credit and finance staff, go-live support, and post-go-live maintenance and support.

The Loan Model has no customer-facing screens. It exposes APIs used by the SINGER website now and the SINGER Marketplace app in Phase 02.

3. Functional requirements

For each requirement, vendors must state compliance as Fully compliant (out of the box), Configurable, Customization required (with effort), or Not supported.

M = mandatory, D = desirable.

3.1 Group A: Customer and credit assessment

ID	Feature	Requirement	Priority
LM-01	Customer Registration	Create the customer loan record using onboarding data received through the API, including NIC, name, contact details, and e-KYC reference. Maintain a single customer record per NIC across all channels.	M
LM-02	Customer Eligibility Check	Configure pre-checks to validate customer eligibility before proceeding with the loan, including • Minimum age of 18 years • Verified e-KYC status • Verified bank account • No delinquent SINGER HP or BNPL accounts • Sufficient available credit exposure • HP protection rules based on customer segment, product category, and price band	M
LM-03	Credit Score / Credit Assessment	Assess customer buying power using bank statements, salary slips, and income statements. The system will automatically extract key information such as income, salary regularity, and visible financial obligations using OCR and bank-statement parsing, while also performing tamper detection and generating a risk score for each document.	M
LM-04	Credit Score / Credit Assessment	Implement a configurable, rule-based scorecard using document-derived income and the customer's SINGER purchase and HP repayment history from IFS, without relying on credit bureau data. The scorecard will generate a risk tier, with rules configured by authorized SINGER credit staff without requiring a software code release.	M
LM-05	Credit Score / Credit Assessment	Support for a trainable, versioned scoring model later, with champion / challenger testing	D

3.2 Group B: Loan structuring

ID	Feature	Requirement	Priority
LM-06	Loan Amount / Purchase Amount	The calculated amount will be validated against the customer's approved credit limit and the defined minimum and maximum loan amounts for the selected product.	M

ID	Feature	Requirement	Priority
LM-07	Down Payment	Configure minimum down-payment requirements by product category, risk tier, and loan tenor, supporting either a percentage or fixed amount, including the option for zero down payment. The actual down-payment received will be recorded and verified before the loan is created.	M
LM-08	Loan Tenure	Configurable tenors (6 / 12 / 18 months, extendable), with eligible tenors by risk tier and product	M
LM-09	Interest / Service Charge	Configure interest rates or flat service charges based on loan tenor, risk tier, and product, together with applicable processing fees. The solution should also support interest-free promotional offers where applicable.	M
LM-10	Installment Calculation	Calculate the instalment amount for each eligible loan tenor and return the available options through the API. Each plan option will include key financial details (cash price, down payment, loan amount, applicable charges, instalment amount, and total repayable amount) in Sinhala, Tamil, and English. Rounding rules will be configurable to support the required calculation and presentation formats.	M

3.3 Group C: Schedule and charges

ID	Feature	Requirement	Priority
LM-11	Repayment Schedule	Generate a repayment schedule for each loan, detailing instalment due dates, principal amounts, interest or service charges, and applicable fees. Whenever a loan is adjusted, the repayment schedule will be recalculated and regenerated, with version history maintained to track all changes.	M
LM-12	Due Date Management	Configure instalment due-date rules to support either a fixed day of the month or the purchase anniversary date. Allow customers to select from the permitted due dates, with configurable handling for weekends and public holidays. Support a one-time due-date change, subject to the required approval process.	M
LM-13	Late Payment / Penalty	Configure the grace period, late fees, and penal interest applicable to overdue instalments, subject to system-wide maximum limits. Any waiver of late fees or penal interest must be processed through the defined approval workflow.	M
LM-14	Discount / Promotional Offers	Support discounts at both the initial sale stage and the final settlement stage. Allow promotional campaigns to be configured by product, campaign period, and loan tenor, with support for promo codes. Each discount applied to a loan must be recorded and accounted for in IFS.	M

3.4 Group D: Limits and exposure

ID	Feature	Requirement	Priority
LM-15	Credit Limit Management	Assign an approved credit limit to each customer based on their applicable risk tier. Support the full credit-limit lifecycle, including	M

ID	Feature	Requirement	Priority
		periodic review, increase, decrease, freeze, expiry, and reactivation. Allow configurable limit increases when additional supporting documents are provided and successfully assessed.	
LM-16	Credit Limit Management	Calculate the single customer exposure as the total outstanding amount in LKR across all SINGER Hire Purchase (HP) and SINGER credit facilities, covering all channels and platforms and linked to the customer's NIC. The system will perform a real-time exposure check against the fixed SINGER credit limit and apply a hard block when the customer's total exposure exceeds the permitted limit. Amounts associated with pending orders will also be reserved and included in the exposure calculation to prevent over-utilization of the customer's available limit.	M
LM-17	Guarantor Management	Support an optional guarantor for each loan, subject to configuration by product, loan amount, or customer risk tier. Where a guarantor is required, the system will capture the guarantor's NIC, relationship to the customer, and required consent, and perform a separate exposure check against the guarantor's existing SINGER HP and BNPL obligations. Guarantor requirements will be disabled by default for BNPL products and may be enabled through configuration where applicable.	M

3.5 Group E: Approval of disbursement

ID	Feature	Requirement	Priority
LM-19	Loan Approval Workflow	Support automated loan decisioning with three outcomes - auto-approve, refer for manual review, or decline. Implement a configurable approval authority matrix based on loan amount and customer risk tier. Loans requiring manual assessment will be routed to an underwriter queue with SLA timers to monitor review and decision timelines. For declined applications, the API will return the applicable decline reason(s) to enable clear communication and downstream processing. (Third party application integration required for human attention approval work flow process)	M
LM-20	Agreement Generation	Loan agreement generated per loan from versioned templates in Sinhala, Tamil and English, including all key facts and the repayment schedule	M
LM-21	Digital Signature / E-Signature	Agreement sent to SINGER's existing digital signature system. Signed status and document reference received back. No loan proceeds without a signed agreement	M
LM-22	Disbursement / Order Confirmation	Create the loan with the approved loan proceeds allocated directly to SINGER against the corresponding e-commerce order, with no cash disbursement to the customer. Loan activation will be triggered based on a configurable order event, such as order confirmation or successful delivery.	M

3.6 Group F: Repayment

ID	Feature	Requirement	Priority
LM-23	Repayment Collection	Instalment requests sent to the Direct Debit service (RFP 03) on due dates, with configurable retries. payments from other channels (card, LankaQR, bank transfer, showroom) received by API	M
LM-24	Payment Allocation	Configure the allocation priority for customer payments across penalty, fees, interest, and principal, with the default allocation applied to the oldest outstanding due first. Any overpayment will either be retained as a customer credit balance or applied toward the next instalment, based on the configured business rules. Where required, customers will be able to direct payments toward a specific loan, subject to applicable allocation rules and system controls.	M
LM-25	Early Settlement	Support both full and partial loan settlement, with a settlement quote generated with a configurable validity period. For early settlement, any unearned interest, service charges, or other applicable charges will be rebated in accordance with the defined settlement policy. Any applicable end-stage settlement discount will also be calculated and applied as per the configured business rules.	M
LM-26	Loan Cancellation / Reversal	Support loan cancellation before activation. After activation, the system will support returns, partial refunds, and loan plan adjustments, with the repayment schedule automatically recalculated based on the revised loan value. The revised instalment amount will be submitted, where applicable. The system will also restore the customer's available credit limit based on the adjustment and calculate any refund amount due to the customer. **Incorrectly posted payments will support reversal through an authorized approval process, with all adjustments and reversals recorded for audit purposes. (Optional feature)	M

3.7 Group G: Delinquency and recovery

ID	Feature	Requirement	Priority
LM-27	Delinquency / Arrears Management	Days-past-due tracking, configurable arrears buckets, automatic limit freeze, staged reminders and promise-to-pay recording	M
LM-28	Collection / Recovery Management	Collection case queues for the SINGER call center by arrears bucket, contact outcomes, rescheduling and restructuring with approval, and default and write-off with approval; no third-party contact	M

3.8 Group H: Customer information

ID	Feature	Requirement	Priority
LM-29	Customer Notifications (SMS / Email / Push)	Event-triggered notifications through SINGER gateways in three languages Approval, agreement, schedule, pre-debit reminder, payment receipt, missed payment, settlement and closure. Need to maintain template management.	M

ID	Feature	Requirement	Priority
LM-30	Loan Statement	On-demand and periodic statements per loan, as PDF and by API	M
LM-31	Payment History	Full transaction history per loan and per customer	M
LM-32	Loan Status Tracking	Lifecycle states (applied, approved, signed, active, in arrears, settled, cancelled, written off) with timestamps, by API and webhooks	M

3.9 Group I: Governance

ID	Feature	Requirement	Priority
LM-33	Reports & Dashboards	Provide comprehensive reporting covering approvals and declines by risk tier, disbursements, total customer exposure, arrears ageing, collection performance, comparisons between SINGER HP and SINGER Credit, discounts, and applicable regulatory reporting requirements. Reports will support filtering and analysis based on relevant business parameters and will be exportable in both Excel and CSV formats.	M
LM-34	Audit Trail	Maintain an immutable audit log of all critical system activities, including credit decisions, loan plan changes, payment postings, configuration changes, and user actions. Each audit record will capture the relevant user or system actor, timestamp, action performed, and applicable before-and-after values. For every credit decision, the system will also maintain an explainability record capturing the key rules, factors, and decision outcome used to arrive at the decision.	M
LM-35	Audit Trail	Versioned policy with effective dates for all rules, pricing, fees, discounts and limits including system-wide caps on interest, fees and penalties	M

4. Integration, non-functional and compliance requirements

4.1 Integrations

ID	System	Direction and purpose	Priority
LM-I01	SINGER website (Marketplace app in Phase 2)	Loan amount requests, plan options, key facts and loan creation through Loan Model APIs	M
LM-I02	IFS ERP	Product and pricing fee. HP accounts and outstanding balances (real time). purchase history.	M
LM-I03	e-KYC platform	KYC status as a prerequisite for approval	M
LM-I04	Direct Debit service	Account verification result, mandate status, instalment amounts, payment results	M
LM-I05	SINGER digital signature system	Agreement data out, signed status in	M
LM-I06	SINGER e-commerce	Order confirmed, delivered, returned and cancelled events	M
LM-I07	SINGER call-center	Read-only loan view, and permitted loan actions	D

ID	System	Direction and purpose	Priority
	system		
LM-I08	Payment gateway, SMS, email and push gateways	Payments from other channels and notification requests out	M

All integrations must use documented, versioned REST APIs or events, with sandbox access for SINGER developers.

4.2 Non-functional requirements

ID	Requirement	Priority
LM-N01	24 × 7 availability with at least 99.9% monthly uptime	M
LM-N02	Checkout-critical API calls, including customer credit-limit checks and automated loan approval decisions, will return a response within **3 seconds** at the 95th percentile under the agreed production workload. Performance will be monitored to ensure that these response-time requirements are consistently maintained.	M
LM-N03	Flexible scalability based on demand	M
LM-N04	Disaster recovery. Need to declare RPO and RTO.	M
LM-N05	Separate sandbox, UAT and production environments	M
LM-N06	Data residency and cross-border transfers compliant with the Personal Data Protection Act	M
LM-N07	SINGER owns all customers, credit and transaction data, with full export and migration support	M
LM-N08	Mandatory requirement of Configuration changes (rules, pricing, templates) without code releases	M

4.3 Security

ID	Requirement	Priority
LM-S01	Encryption in transit (TLS 1.2+) and at rest for all personal and financial data	M
LM-S02	Role-based access, MFA for staff, and privileged access logging	M
